

The showtags package^{*}

Nelson H. F. Beebe[†]

06 September 1995

This style file causes the bibliography citation tags to be displayed in boldface text in a right-adjusted framed box over each entry in a bibliography. This serves as a handy reference when the tags are needed for a `\cite{}` macro.

For flexibility, the user may redefine `\thecitetag` to change the format. E. g.

```
\renewcommand{\thecitetag}[1]{\fbox{\small\tt #1}}
```

would typeset the tag in small typewriter text in a box.

The `checksum` field in the `showtags.sty` file contains a CRC-16 checksum as the first value, followed by the equivalent of the standard UNIX `wc` (word count) utility output of lines, words, and characters. This is produced by Robert Solovay's `checksum` utility.

Revision history:

- 1.04 [06-Sep-1995] update for L^AT_EX 2_ε support
- 1.03 [12-Sep-1994] update file header, and add `\strut` to label box
- 1.02 [10-Sep-1991] update file header, trim trailing space
- 1.01 [11-Jul-1990] almost original version

^{*}This manual corresponds to `showtags.sty` v1.04, dated 06 September 1995.
