

The **parskip** package

H. Partl Robin Fairbairns*

2001/04/09

This is PARSKIP.STY by H. Partl, TU Wien, as of 19 Jan 1989.

Package to be used with any document class at any size. It produces the following Paragraph Layout:

Zero Parindent and non-zero Parskip. The stretchable glue in `\parskip` helps L^AT_EX in finding the best place for page breaks.

This package is no more than quick fix; the ‘proper’ way to achieve effects as far-reaching as this is to create a new class. An example class is to be found in the ntgclass set: `artikel3.cls`
