The **rotate** package

Anonymous

13 Jan 2006

These macros allow you to rotate or flip a TEX box. Very useful for sideways tables or upsidedown answers.

To use, create a box containing the information you want to rotate. (An hbox or vbox will do.) Now call `\@rotr\boxnum` to rotate the material and create a new box with the appropriate (flipped) dimensions. `\@rotr` rotates right, `\@rotl` rotates left, `\@rotu` turns upside down, and `\@rotf` flips. These boxes may contain other rotated boxes.
